The Eurovan Forum

you deserve
the best

The personality of this highly traditional German brand reflects a symbiosis of design, quality and functionality. EUROVAN, is one of the world's leading manufacturers with a global distribution network.

The company's core competence is its knowledge in the area of sanitary ware manufacturing. Over 50 years, the EUROVAN brand has been using the oldest malleable material known to man to make innovative sanitary products in state-of-the-art plants with legendary German precision. Knowledge of the bathroom as a whole developed from the competence of EUROVAN products unique at the first glance is that their German design unites two major design trends: emotional Italian design from the south and northern tradition of design precision and clarity.

For EUROVAN, quality has two aspects: manufacturing knowledge and high degree of practical benefit that the finished bathroom affords the customer which is often immediately apparent. EUROVAN, a German company manufacturing product that allows water, a precious resource, to be used sparingly, demonstrates in this manner a commitment to preserving natural resources and environment-friendly production.

German
Quality

Outstanding Design

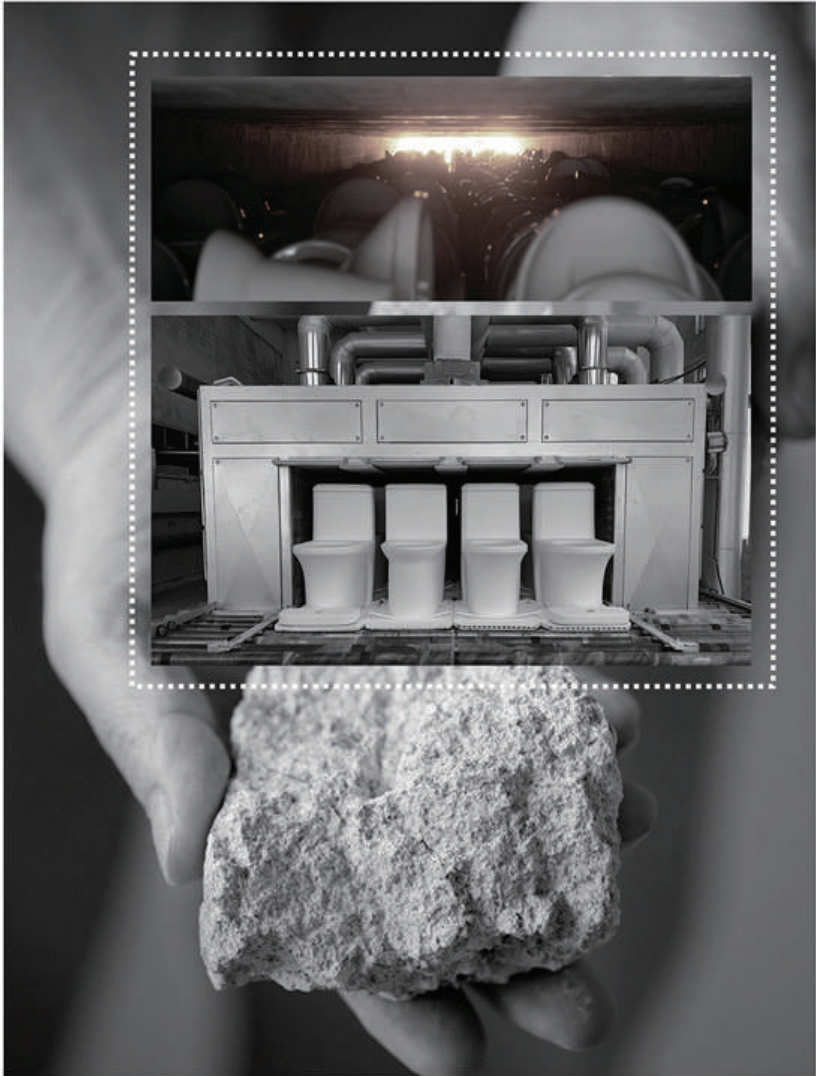

Although exquisite craftsmanship has always been a trademark of EUROVAN products, a great deal of thought goes into their design too. For several decades now, EUROVAN, has had positive experience of the successful collaboration with outstanding architects and designers. In the development of new bathroom suite concepts, the expectations of the designer are met by the experience and precision of modelers, product developers and engineers.

The shared objective: to shape the elegant materials as intelligently and pragmatically as possible while maximizing their aesthetic appeal, minimizing the impact on the environment while using resources as sparingly as possible. The company's product range is further enhanced by innovative material developments through the production of a near white porcelain body that allows smaller radii and a slimmer appearance.

This interplay of creative design concepts and a precise manufacturing process using state-of-art technology facilitates an approach to the bathroom as an environment – an intelligent composition of the sum of its parts. The result: a highly functional and aesthetic product range. From ceramic sanitary ware, through to faucets, bathroom furniture and mirrors, to shower trays, bathtubs and whirl systems, in all price categories. At the same time, we use our knowledge and experience to achieve a high degree of individuality, in line with the wishes of our customers. As well as additional colours, surface finishes and motifs, made-to-measure washbasins that can be cut to the required size are possible, also with short delivery times.

Advanced
Rolling Klin

Innovative Technology

Sustainable Quality

EUROVAN manufacture products that allow water, a precious resource, to be used sparingly and therefore demonstrates its commitment to preserving natural resources. It therefore places priority on environment-friendly production, using energy and raw materials sparingly at all levels of production from development to marketing. EUROVAN actively looks for environment-friendly solutions for many of its products. However, places a great deal of emphasis on making products of outstanding quality, as numerous internationally-recognized product certificates and standard testify. The German Q-Plus symbol certifies compliance of our products with the European standard and established more exciting German Standard. This is an important aspect for EUROVAN, as only durable, low-wear products deserve to be called environmentally-friendly – after all, avoidance comes before recycling. EUROVAN, thus helps customers to live in harmony with the environment and reduce energy costs. Our products therefore also feature the newest generation of water-saving WCs: several EUROVAN toilets flush using an optional 4.5 or 3 liters dual flush system opposed to 6- or 3-liters conventional WCs.

We also have particularly efficient urinals that require not more than 1 liter of water for flushing. For public sector, we even have urinals with a special low-maintenance siphon: 0-liter solution

Eurovan Clean Coat

ECC stands for Eurovan Clean Coat. This innovative ceramic surface finish is a vitreous silicate ceramic coating which is fired on top of the original glaze. ECC is an extremely hard, indeed almost indestructible indivisible part of the ceramic object to which it is applied.

The benefits of this process: With a roughness of only 4 nanometers, ECC is entirely free of pores. Thanks to this feature, lime, dirt and bacteria have practically nowhere to gain a foothold- and even if they do, they can be removed much more easily. A hydrophobic effect caused by the materials ensures that dirt particles are more easily washed away on flushing. In addition, cleaning and disinfection fluids spread over the surface more easily and thus work more effectively. This is an ideal solution for the rigorous demands of everyday cleaning- for example in hotels or clinics- as ECC also means the sanitary ware is highly resistant to aggressive cleaning agents and chemicals. ECC ensures the highest standard of cleanliness and hygiene in the long-term. Even after years of use, the sanitary ware remains smooth and shiny, just as it was when it was brand new, in private bathrooms and public and semi-public areas.

Eurovan Top Recycling Qualities

Top recycling qualities: Ceramic is the oldest malleable material used by mankind- and consists exclusively of naturally occurring raw materials. Ceramic is 100% recyclable and can be reintroduced into production processes as a ground powder or reused as a valuable raw material in other industries.

Eurovan Concealed Ceramic Overflow System

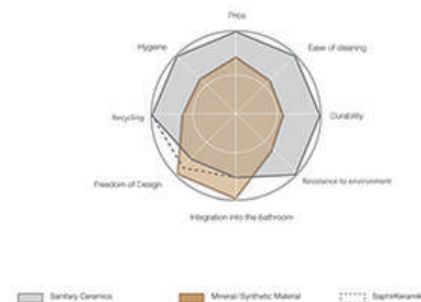

Our **concealed ceramic overflow system**, the alternative to standard overflows for washbasins and bidets, has many benefits. Thanks to our overflow system which is invisible from the outside, our washbasins and bidets no longer have a visible overflow hole, which not only improves the appearance of the product, it also makes cleaning much easier. This hygienic and aesthetic innovation is very simple: water rises in a concealed internal channel in a parallel with the water inside the washbasin, and overflows into the run-off when the water reaches the maximum level.

Another attractive detail of EUROVAN washbasins is the ceramic cover on the pop-up waste valve, which is available in a variety of glazes. These covers are available with a wide range of pop-up waste valve versions for many washbasin and bidets.

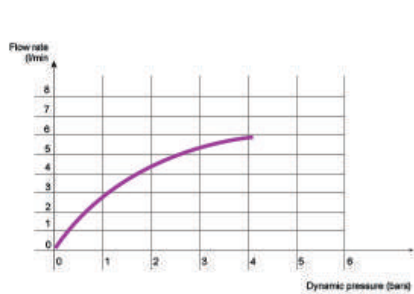

Eurovan Ceramics or Synthetic Materials

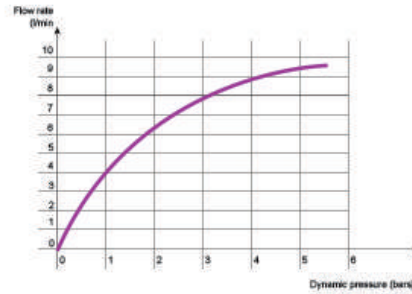

Ceramics or synthetic materials: Ceramic is the material which has been traditionally used in the bathroom over the centuries- and with good reason. The superiority of the material is evident, particularly in terms of hygiene, useful lifetime, environmental compatibility and durability. However, washbasins made of plastics and mineral-based cast materials are also available on the market, which present a design challenge to producers of sanitary ware. EUROVAN has always had a reputation as an innovator in the sanitary sector and is always striving to improve the materials and production techniques it uses. As a result of this efforts, new ceramic compositions have been developed that allow smaller tolerances and even more precise corner radii or large flat ceramic items. Made to measure washbasin solutions ensure that ceramic sanitary ware can be fitted with millimeter precision into bathroom floor plans. Ceramics therefore deliver outstanding performance in all respects.

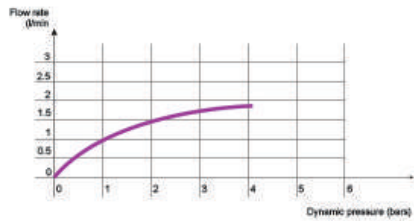

Fixture type	OCC Rating Class ^a					Plumbing Code	Units for Water Usage Rate
	E	D	C	B	A		
Bathroom faucet, private ^a	6.0	5.0	4.0	3.0	2.0	6.0	L/min
Bathroom faucet, public ^a	No standard	No standard	1.9	1.9 ^b	1.9 ^c	6.0	L/min
Showerhead ^d	9.5	8.5	7.5	6.5	5.5	10.0	L/min
Kitchen faucet ^a	6.0	5.0	4.0	3.0	2.0	8.0	L/min
Bidets/bidet sprayer ^a	6.0	5.0	4.0	3.0	2.0	8.0	L/min
Toilet, single-flush	Not covered					5.0	L/flush
Toilet, dual-flush ^a			6.0/4.0	4.5/3.0	4.0/2.5	6.0/4.0	L/flush
Urinal					0.5	2.0	L/flush
